SUMMARY

Software Engineer with hands-on experience building full-stack web applications, backend services, cloud infrastructure, internal tools, and AI-powered automation systems. Comfortable owning projects end-to-end across the frontend, backend, database, and cloud stack, with a track record of turning business requirements into reliable, maintainable software that reduces manual work and improves operational efficiency.

EXPERIENCE

Attanda Mar 2026 – Present
Founding AI Systems Engineer Vienna, Austria

- Built AI agents, voice AI systems, and workflow automations using Python, Vertex AI, BigQuery, Cloud SQL, Cloud Run, APIs, webhooks, and cloud-native services.
- Designed lead capture and business automation workflows integrating AI services, databases, reporting systems, and operational dashboards.
- Built AI-powered voice workflows for capturing, validating, and structuring customer lead information.
- Developed backend services and automation pipelines for data processing, validation, monitoring, and operational visibility.
- Used ChatGPT, Claude Code, and AI-assisted development workflows for rapid prototyping, debugging, architecture planning, and production implementation.
- Worked directly from business requirements to deliver end-to-end AI solutions, internal tools, and reliable automation systems.

DORA Consulting May 2026 – Present
Software Consultant & Full-Stack Engineer Remote

- Delivered production web applications for external clients, owning architecture, hosting decisions, and end-to-end implementation.
- Built the DORA Platform, a Next.js, NestJS, and PostgreSQL application containerized with Docker, and led a hosting provider evaluation resulting in a GDPR- and ISO 27001-compliant EU deployment on Hetzner Cloud.
- Designed and scoped Wolke7 Seeschlacht, a reservation system for a beach club client, built with Next.js, TypeScript, PostgreSQL, and Prisma, producing full specification, data model, and build-plan documentation.
- Translated client business requirements into clean data models, reliable backend services, and maintainable full-stack systems.

DOA – Digital Ordering Application Jul 2022 – Sep 2024
Founder and Full-Stack Engineer Remote

- Co-founded a digital ordering platform automating restaurant operations through QR-based ordering.
- Built REST APIs, authentication, dashboards, order management workflows, and backend services using Node.js, Express.js, and SQL, with integrations for order notifications, kitchen workflows, and reporting.
- Owned product planning, technical implementation, and client needs, translating real business problems into practical software for restaurants, staff, and customers.

CONTRACT / FREELANCE

Mercor Intelligence Jul 2026 – Present
Generalist Expert — AI Evaluation Remote

- Contracted as a domain expert to evaluate and grade AI model outputs on a large-scale model evaluation project.
- Assessed model responses for correctness, reasoning quality, and instruction-following, working within strict compliance and tooling guidelines.
- Contributed structured feedback and quality signals used to improve model performance.

SELECTED PROJECTS

Voice AI Lead Capture System
– Built an AI-powered voice agent that captures, validates, and structures customer lead information, automating lead collection, reporting, and operational tracking while preserving system fields such as Call ID, Date/Time, and Source.

AI Agent & Business Automation Workflows
– Developed AI agent systems integrating cloud services, APIs, databases, and webhooks to automate data collection, validation, reporting, and monitoring, with a focus on reliability, scalability, and production readiness.

EDUCATION

TU Wien – Vienna University of Technology 2026 – 2028
MSc, Software Engineering and Internet Computing Vienna, Austria

University of Prizren 2021 – 2024
Bachelor in Software Design Prizren, Kosovo

SKILLS

Languages & Frameworks: Python, JavaScript, TypeScript, SQL, Node.js, Express.js, Next.js, NestJS, React, Prisma
Cloud & Infrastructure: GCP, Vertex AI, BigQuery, Cloud SQL, Cloud Run, Docker, CI/CD, Webhooks, REST APIs, PostgreSQL, MongoDB
AI & Automation: AI Agents, Voice Agents, Chat Agents, Workflow & Business Process Automation, Prompt Engineering, RAG, Claude Code, ChatGPT, n8n
Spoken Languages: Albanian Native, English Fluent, German Basic

ADDITIONAL

Presented research at the BRIDGE 2023 Conference on a real-time face recognition system for access control and security applications. Programming Trainer Assistant at jCoders Academy.
